

# The Cancer Registry CASEbook

The **Cancer Registry CASEbook** is an important reference for both beginner and seasoned registrars. The 394-page CASEbook includes introductory chapters on ICD-O-3, TNM, Summary Staging, Collaborative Staging, and the 2007 Multiple Primary and Histology Coding Rules.

Volume I includes site-specific chapters on the five major cancer sites: colon, lung, breast, prostate, and bladder. Each site-specific chapter contains information on the site's cancer disease process; structural and regional anatomy with illustrations; an overview of the MP/H rules and histology for the site; abstracting and disease management guidelines, including explanations of surgery codes; "usual" treatment by stage group; collaborative staging guidelines with illustrations; a dozen case scenarios to code with answers and rationales; and more!
